Ahmedabad, Gujarat, India 📁 Portfolio

Summary

IT Engineering student (CGPA 9.33/10) specializing in full-stack and backend development, with hands-on experience building production-style applications using React.js, Node.js, Express.js, Python, Flask, PostgreSQL, and MongoDB. Built systems spanning role-based authentication, priority-queue-driven ticketing, and ML-assisted classification pipelines. Seeking SDE / backend engineering internship opportunities.

Technical Skills

Languages: Java, Python, JavaScript, SQL
Frontend: HTML5, CSS3, Bootstrap, Tailwind CSS, React.js
Backend: Node.js, Express.js, Flask, REST APIs, JWT Authentication, API Integration
Databases: PostgreSQL, MySQL, MongoDB
Tools: Git, GitHub, VS Code, Postman, pgAdmin
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Computer Networks

Projects

Ticket Tally – Smart IT Ticket Management System | *Flask, PostgreSQL, JavaScript, JWT* [GitHub](#) — [Live Demo](#)

- Built a full-stack IT support ticketing platform covering the complete lifecycle – creation, assignment, prioritization, and resolution – with role-based access for Employees, IT Staff, and Administrators.
- Designed a Priority Queue-based scheduling engine that automatically re-ranks tickets by urgency and SLA deadline, ensuring high-priority issues are surfaced ahead of standard requests.
- Implemented secure JWT authentication with route-level access control across all three dashboards.
- Integrated automated email notifications, SLA breach tracking, and on-demand PDF ticket generation to streamline the resolution workflow.

Civic Lens – AI-Powered Civic Issue Reporting Platform | *React, Django, DRF, FastAPI, PyTorch, MongoDB* [GitHub](#)

- Built an AI-powered civic issue reporting platform enabling citizens to report infrastructure problems via geotagged photos, with a public dashboard for tracking resolution status.
- Designed and trained a PyTorch classification pipeline, served via FastAPI, to auto-categorize issue type and severity, with low-confidence predictions routed to a manual review queue for human verification.
- Engineered a two-stage duplicate-detection system combining MongoDB 2dsphere geospatial queries, perceptual hashing, and CNN embedding similarity to automatically identify and merge duplicate reports.
- Implemented community-driven ticket verification, JWT-based RBAC authentication, RESTful APIs, and an admin analytics dashboard for tracking KPIs and reporting trends.

Education

Bachelor of Engineering in Information Technology

Lok Jagruti (LJ) University

2024 – 2028

Ahmedabad, Gujarat

- **CGPA:** 9.33 / 10
- **Relevant Coursework:** Data Structures, DBMS, Object-Oriented Programming, Web Development, Computer Networks

Certifications & Achievements

- **Inheritance and Data Structure in Java** – Coursera [Verify](#)
- **Exploratory Data Analysis for Machine Learning** – Coursera [Verify](#)
- **Lakshya 2.0 Hackathon** – LD College of Engineering [Participant](#)

Additional Information

Interests: Full-Stack Development, Backend Engineering, Software Development, Data Structures & Algorithms
